

KARTIK KACHWAHE

Data Analyst | Data Scientist

Bhopal, Madhya Pradesh, India | +91-6268373679 | kartikkachwahe25@gmail.com

[linkedin.com/in/kartikkachwahe021](https://www.linkedin.com/in/kartikkachwahe021) | github.com/KartikKachwahe

PROFESSIONAL SUMMARY

Data Science professional who has built end-to-end ML and NLP-driven projects spanning predictive modeling, content-based recommendation systems, SQL-driven analytics, and interactive dashboards. Proficient in Python, SQL, statistics, and the full analytics lifecycle — data cleaning, exploratory data analysis, feature engineering, predictive modeling, and model evaluation. Experienced translating datasets into measurable insight and deploying user-facing applications to support data-driven decision-making.

TECHNICAL SKILLS

- **Programming & Databases:** Python, SQL
- **Data Analysis & Processing:** Pandas, NumPy, Data Cleaning, Exploratory Data Analysis (EDA), Feature Engineering
- **Machine Learning & NLP:** Scikit-learn, XGBoost, Classification, Regression, Predictive Modeling, Model Evaluation, TF-IDF Vectorization, Cosine Similarity, Content-Based Recommendation Systems
- **Data Visualization & BI:** Matplotlib, Seaborn, Plotly Dash, Power BI, Tableau, Microsoft Excel
- **Core Concepts:** Statistics, Probability, Data Preprocessing
- **Tools & Platforms:** Jupyter Notebook, Git, GitHub, AWS

PROJECTS

Heart Disease Prediction Model | Python, Scikit-learn, Pandas, NumPy

Repository: github.com/KartikKachwahe/Heart-Disease-Prediction-Model

Live Demo: heart-disease-prediction-model-xmevu2ud8czkmysmup6uak.streamlit.app

- Built and benchmarked 5 classification models (Logistic Regression, KNN, SVM, Naive Bayes, Decision Tree) on the UCI Heart Disease dataset (918 patient records, 12 clinical features) to predict cardiovascular disease risk.
- Achieved the best performance with K-Nearest Neighbors — 88.59% accuracy and 0.899 F1-score — after systematic data cleaning, EDA, and feature engineering.
- Deployed an interactive web application enabling real-time, single-patient risk prediction from user-input clinical data.

Movie Recommendation System | Python, Scikit-learn, NLP (TF-IDF)

Repository: github.com/KartikKachwahe/Movie-Recommendation-System

Live Demo: movie-recommendation-system-tbwgaistgz6uotqvtjmbuw.streamlit.app

- Built a content-based movie recommendation engine using NLP techniques — TF-IDF vectorization and cosine similarity — to surface titles most similar to a user-selected movie.
- Designed an interactive frontend with keyword search, autocomplete suggestions, and a movie details page combining TF-IDF-based "similar movies" with genre-based recommendations.

INTERNSHIP

- **Data Science Intern | Cognifyz Technologies | Sep 2024 – Oct 2024** | Python, Pandas, NumPy, SQL, Scikit-learn, Gradient Boosting, Logistic Regression, Plotly Dash
- Analyzed 180,159 global supply chain transactions (53 features) end-to-end — data cleaning, feature engineering, EDA, and SQL-based KPI development — to surface delivery, revenue, and fraud-risk patterns.
- Designed interactive Plotly Dash dashboards tracking revenue, profit margin, on-time delivery rate, and regional performance, filterable by market, region, shipping mode, and product category.
- Built a late-delivery prediction model (Gradient Boosting: 70.8% accuracy, 0.770 AUC) and a fraud-detection model (Logistic Regression: 0.968 AUC, 86.1% recall), translating results into logistics and fraud-monitoring recommendations.

CERTIFICATIONS

- **Complete Data Analyst Bootcamp (66.5 hrs)** — Udemy | Dec 2024
- **Data Visualisation (TCS) & Data Analytics Job Simulation (Deloitte)** — Forage | Jul 2026

EDUCATION

Bachelor of Technology (B.Tech) — Barkatullah University Institute of Technology, Bhopal

Aug 2021 – Jul 2025 | CGPA: 7.24
